EDUCATION

Muffakham Jah College of Engineering and Technology, Hyderabad | B.Tech in Information Technology | 2022 – 2026
CGPA: 8.8

TECHNICAL SKILLS

Frontend & Mobile: Flutter, React Native, HTML, CSS, Tailwind CSS

Backend & Databases: FastAPI, Flask, Firebase, MongoDB

AI / ML: RAG, NLP, Federated Learning, Hugging Face, OpenCV, YOLOv8

Languages: Python, JavaScript, TypeScript

Tools & Platforms: Git, GitHub, Firebase, ESP32, REST APIs

PROJECTS

TruthLens — AI Fact Verification Platform

FastAPI • Flutter • RAG • NLP

- Developed an AI-powered fact verification platform using Retrieval-Augmented Generation (RAG) with support for text, URLs, documents, and images, and implemented evidence-based validation, credibility scoring, and structured AI-generated responses with a responsive user interface.

Smart Parking System — Intelligent Parking Management

ESP32-CAM • OpenCV • YOLOv8 • FastAPI • React Native (Expo)

- Built a real-time smart parking system using ESP32-CAM, OpenCV, and YOLOv8 for vehicle slot detection and occupancy monitoring.
- Integrated predictive analytics, automated billing workflows, LCD-based parking status display, and live mobile monitoring features.

WellNest — AI Healthcare Web Application

React.js • TypeScript • Node.js • Express • MongoDB • [Socket.io](https://socket.io/)

- Developed a full-stack healthcare platform enabling real-time doctor-patient communication and AI-assisted health support.
- Implemented appointment booking, secure JWT authentication, symptom analysis, and health tracking features, built scalable backend APIs using Express and TypeScript with real-time communication via [Socket.io](https://socket.io/), and integrated AI and cloud services, including OpenAI, Twilio, and Google Cloud APIs.

MIGO — Motorcycle Training Platform

Flutter • FastAPI • MongoDB • JWT Authentication

- Built a mobile platform connecting learners with certified motorcycle trainers through location-based matching.
- Developed backend APIs for authentication, session booking, course management, and real-time training workflow handling.

Federated Learning NLP System

Python • Flask • NLP • Federated Learning

- Designed a privacy-preserving sentiment analysis system using federated learning techniques across distributed datasets.
- Trained NLP models and deployed a Flask API for real-time sentiment prediction and inference.

AI Misinformation Detection Mobile App

Flutter • FastAPI • AI Integration

- Developed a mobile application for misinformation detection with AI-powered backend integration and real-time verification workflows, also focused on intuitive UI design, structured result visualization, and efficient handling of multi-format inputs.

INTERNSHIPS

Data Science Intern

- Trained and optimized ML models using Hugging Face frameworks through iterative experimentation and evaluation.

Talyouth (Novalgnis) Intern

- Conducted awareness sessions in underdeveloped schools on hygiene and education as part of SDG-based outreach initiatives.
